## BLACKOUT 2003 FOLLOW-UP

### Working Groups/Ad Hoc Assignments

Item	Name	Assignment	Completion Date(s):
<b>BSP</b>	Blackout Study Plan	Building on the Event Replication Study, perform additional analysis to evaluate possible risks for other system operating conditions, planned system changes, and possible system design changes.	<b>Task 1 Completed</b> <b>Task 2 November 2004</b> <b>Task 3 November 2004</b> <b>Task 4 April 2005</b> <b>Task 5 August 2005</b> <b>Task 6 November 2005</b>
	<b>Status/ Comments:</b>	The TFSS has submitted a revised multi-tasked draft scope of work for RCC review and approval at their July meeting. Task 1 – Initial Compilation of Data; Task 2 – Dynamic Replication of Events; Task 3 – Evaluation of Post-Islanding Performance; Task 4 – Evaluation of System and Equipment Performance During Island Formation; Task 5 – Evaluation of Other Potential Preventative Mitigation Measures; and Task 6- Final Report.	
	<b>NPCC Contact:</b>	<b>Donal Kidney</b>	

Item	Name	Assignment	Completion Date:
<b>MSDTF</b>	Major System Disturbance Task Force	NPCC formed the MSDTF following the August 14th Blackout, supplementing NPCC's SS-38 Working Group with representatives from ECAR, the MISO, PJM and SERC to conduct dynamic simulation analyses of the events.	<b>December 2004</b>
	<b>Status/ Comments:</b>	The MSDTF has completed benchmarking in the replication of the first massive power swing through NPCC into Michigan, the reversal and the second power swing (16:10:43). The MSDTF has had difficulty completely replicating the Detroit Area generators slipping poles during deceleration. The simulations have been done replicating the disturbance to break up into islands (post 16:11) with good correspondence. This has effectively completed the TFSS Study Task 1 and most of Task 2 (see Item BSP).

<b>MEN SC</b>	MEN Study Committee	The MEN Study Committee directs the activities of the MEN Operating Studies and Future Systems Working Groups and reports to the Joint Interregional Review Committee (JIRC) on study activities and other interregional matters of interest.	<b>December 2004</b>
	<b>Status/ Comments:</b>	The MEN Working Group and Study Committees had been fully devoted to conduct the steady state analysis portion of the August 14 disturbance investigation for NERC and the US-Canada Investigation Team. This included the development of a base case replicating conditions on August 14 representing conditions just before the first major circuit outage. In addition, each significant outage throughout the disturbance was simulated and benchmarked and various "What If" scenarios were studied. As a result, the issuance of the 2003/04 Winter MEN Inter-regional Assessment Study Report had been delayed from the normal completion time and was issued later than in previous years. However, the transfer capability results and comparison to previous years has been completed on time.
