Subject: NERC Project 2021-04 Modifications to PRC-002 Additional Ballot Recommendation
Date: Friday, October 28, 2022 1:23:47 PM

NPCC Members and Entities of the NERC Registered Ballot Body:

The NPCC Regional Standards Committee (RSC) has followed the drafting activities of the Project 2021-04 Modifications to PRC-002-3 *Disturbance Monitoring and Reporting Requirements* drafting team. The Project including the revised standard (PRC-002-4) and implementation plan is currently posted for comment with an additional 10-day ballot through November 9, 2022.

The purpose of PRC-002-3 is to have adequate data available to facilitate analysis of BES disturbances. Requirements R1 and R5 specify where Sequence of Events Recording (SER), Fault Recording (FR), and Dynamic Disturbance Recording (DDR) devices are required on the Bulk Electric System (BES).

The goal of the project is to clarify the necessary notifications in Requirement R1, Part 1.2 relative to FR data, and clearly identify the BES Element owners that need to have FR data for transformers and transmission lines with the associated identified bus.

NPCC as the Regional Entity will be casting an “**Abstention**” on the posted materials.

Thanks,

Ruida Shu
